

Raul E. Jiminian

Full Stack Engineer | Mobile | AI/ML | 0→1 Product Development

East Elmhurst, NY 11369 • raul.e.jiminian@gmail.com • 347-239-9158 • LinkedIn • Github

Engineering Highlights

- Built and shipped a production mobile social networking application to the Apple App Store using SwiftUI and Firebase, **writing 90%+ of the codebase, shipping 8+ production releases, and onboarding hundreds of users.**
- Designed and **integrated AI-powered mobile workflows** using React Native, AWS S3, Lambda, DynamoDB, API Gateway, and computer vision models to support real-time image recognition experiences with **responses delivered in approximately 2–4 seconds.**
- Developed and **trained a custom convolutional neural network (CNN)** using TensorFlow and Keras to **classify 50+ artwork categories from 5,000+ training images**, replacing AWS Rekognition to improve control over the AI recognition pipeline and **reduce estimated image-recognition costs by 80%.**
- **Mentored and instructed 200+ software engineering students** and enterprise developers in full-stack development, system architecture, debugging, API design, deployment workflows, and applied AI.

Professional Experience

Instructional Lead, General Assembly | New York, NY January 2020 - Present

Teach full-stack software engineering and applied AI to aspiring engineers, enterprise teams, and technical cohorts. Design and deliver training across frontend development, backend systems, databases, APIs, debugging, deployment, and production engineering practices.

- Redesigned software engineering curriculum and learning workflows, increasing student engagement by 30% and reducing withdrawal rates by 45%.
- Instruct and mentor 200+ developers across JavaScript, TypeScript, React, Node.js, Python, Django, backend systems, REST APIs, databases, debugging, and full-stack application architecture.
- Reviewed and coached 50+ production-style full-stack applications, improving code quality, API design, database modeling, state management, and deployment readiness.
- Led 300+ technical code reviews across React, Node.js, Express, Django, MongoDB, and PostgreSQL, helping developers identify bugs, improve architecture, and ship working applications.
- Delivered enterprise software engineering and applied AI training for 10+ organizations including M&T Bank, The New York Times, New York Public Library, and Deloitte.

Founding Software Engineer, Find Your Vibe (FYV) | New York, NY March 2023 - March 2025

Founding engineer for a real-time, geo-location based social mobile application, leading 0→1 development from concept to production launch on the Apple App Store.

- Built and shipped a production iOS app using SwiftUI and Firebase, from initial architecture through App Store release, shipping 8+ production releases, and onboarding hundreds of users.
- Developed 90%+ of the codebase across mobile UI, authentication, real-time data synchronization, geolocation, notifications, profile management, and backend workflows.
- Built Firebase-backed real-time chat and geolocation infrastructure for venue-based communities, enabling users to join live conversations tied to their physical location with real-time synchronization.
- Improved app reliability to 98% crash-free sessions and resolved 25+ production/release-readiness issues across Firebase configuration, permissions, UI behavior, and App Store deployment.
- Reduced feature development time by 30% by establishing 40+ reusable SwiftUI components, modular architecture, data models, and shared implementation patterns for rapid product iteration.

Selected Engineering Projects

Artifact, AI-Powered Museum Companion

React Native | AWS | Computer Vision | Machine Learning

Designed and built a mobile application that enhances museum visits through AI-powered artwork recognition and interactive features.

- Built a mobile app enabling users to scan and identify artwork in real time using image recognition.
- Architected an end-to-end computer vision pipeline from camera capture → cloud upload → model inference → results returned to the application.
- Developed and trained a custom convolutional neural network (CNN) using TensorFlow and Keras, leveraging transfer learning to classify 50+ artwork categories from 5,000+ training images.
- Improved model accuracy to approximately 85–90% by fine-tuning a transfer learning pipeline, validating predictions against labeled artwork images, and iterating on preprocessing workflows.
- Replaced AWS Rekognition with a custom-trained model, reducing reliance on third-party image classification and lowering estimated image recognition costs by 80%.
- Implemented scalable serverless workflows using AWS S3, Lambda, DynamoDB, and API Gateway to process uploaded images, manage recognition results, and support mobile application features.
- Integrated AI/ML, cloud infrastructure, backend services, and mobile UX into a working product workflow rather than a standalone model demo.

Previous Professional Experience

Senior Associate Director, UBS Investment Bank | New York, NY June 2009 - September 2016

Advised **enterprise technology clients** on strategic transactions across M&A and capital markets, partnering directly with executive leadership to drive high-impact financial and operational decisions.

- Advised C-suite executives across multi-million-dollar M&A and capital markets transactions in software, IT services, and communications sectors.
- Built and presented 150+ financial models including DCF, LBO, accretion/dilution, operating models, and valuation analyses to support investment decisions and acquisition strategies.
- Prepared 300+ client-facing presentations, transaction materials, and executive-level analyses, translating complex financial, technical, and strategic concepts into actionable recommendations.
- Supported 25+ live transaction processes across M&A, IPO, debt financing, and strategic advisory engagements under tight deadlines and high-stakes execution environments.
- Developed strong business judgment in enterprise technology markets, supporting the ability to build software products that solve real business problems.

Core Technologies

Languages: JavaScript, TypeScript, Python, Swift, Ruby, SQL

Frameworks: React, Next.js, React Native, Node.js, Express, Django, Flask, SwiftUI

Cloud: AWS (S3, Lambda, DynamoDB, API Gateway, Cognito), Firebase, Serverless architectures

Databases: PostgreSQL, MongoDB, Firestore

Machine Learning & Data Science: TensorFlow, Keras, Scikit-learn, OpenCV, CNNs, transfer learning

Developer Tools & Practices: Git, Jest, Jira, Agile, code reviews, debugging, API design, deployment workflows

Education

Bachelor of Science - Finance, NYU Leonard N. Stern School of Business

June 2009

Dean's List | Sponsors for Educational Opportunity (SEO)
